

Five reasons why customer-obsessed and customer-clairvoyant firms grow faster

firms grow faster by using their data to become more customer-centric. Customer-centricity is now table-stakes for most businesses, but

Our latest research reveals how leading

study of over 300 U.S. firms¹, we plotted companies on a customercentricity spectrum². The results uncovered a fascinating dynamic: between 2020 and their most recently completed fiscal year, customer-obsessed companies' revenue increased around four times faster on average than the revenue of the least customer-centric firms (the customer-indifferent and customer-ignorant ones). Importantly, the obsessed and clairvoyant firms' revenue rose two percentage points higher than the merely customer-responsive ones. What separates these companies from the rest? They have built solid data foundations to collect and analyze greater volumes and types of

customer data. And when new technologies such as genAl emerged,

being customer-obsessed and/or -clairvoyant is even better. In our

they put them to use where they mattered most—continuously improving their data foundations to cut cycle times, applying metadata to improve data organization, and analyzing new data types such as unstructured data, including video and audio files, to gain unique insights into customer behavior. This infographic, the third in a three-part series, highlights five reasons why leading firms turn their customer data into revenue growth.

medical devices, medical products), and telecommunication services. 2. The survey respondents that we grouped as "customer ignorant" or "customer indifferent" said they were not effective in using any of the five data types. In contrast, every survey respondent that we designated as "customer responsive," "customer obsessed" or "customer clairvoyant" used at least one of those five data types effectively or highly effectively. Most used multiple data types effectively or highly effectively.
